DECREES

Art. 1 - Object

A selection procedure by qualifications is hereby opened for the assignment of n. 1 post-doctoral research grants with a duration of 1 year for the Academic Recruitment Field 03/D1 - Pharmaceutical, toxicological and nutraceutical-food chemistry and technologies, in the Department of Biotechnology and Life Sciences.

Research Title: "From the genomic-led discovery to the production of novel glycopeptide antibiotics to tackle antimicrobial resistance".

Research Project: “Antimicrobial resistance spread represents an enormous global health crisis. Different Gram-positive bacteria, as vancomycin-resistant *Enterococcus faecium* and methicillin-resistant *Staphylococcus aureus*, have been indicated among priority pathogens for which new antibiotics are urgently needed. However, novel antimicrobials are difficult to discover and develop, thus creating a widening gap between clinical need and drug pipeline innovation.

In the project, the Post-doc will work on the discovery, production, and characterization of novel glycopeptide antibiotics (GPAs), a class of antibacterial molecules used as front-line against multidrug-resistant Gram-positive pathogens. The discovery of novel GPAs will be driven by a genome mining approach, followed by the definition of the best cultivation conditions to switch on its production, its purification and a preliminary chemical and biological profiling”

The research will be carried out in the Department of Biotechnology and Life Sciences of the University of Insubria.

Research Coordinator: Doctor Francesca Berini.
