DECREES

Art. 1 - Object

A selection procedure by qualifications is hereby opened for the assignment of n. 1 postdoctoral research grant with a duration of 1 year for the academic recruitment field of Applied geology, physical geography and geomorphology at the Department of Theoretical and Applied Sciences.

Title of the research: **"Holocene Paleoenvironment of the Adda Glacier Region: Insights from Multi-Proxy Analysis of Lacustrine Sediments"**.

Research Project:

"This research endeavor focuses on advancing the understanding of paleoclimatic dynamics within an area comprising six interconnected lakes associated with the Abduan glacier: Lake Alserio, Lake Annone, and Lake Pusiano. By employing a comprehensive approach integrating sedimentological, geochemical, and biological proxies, we aim to reconstruct past environmental conditions with unprecedented precision. At least one sediment core per lake will be sampled the cores in the field. Once in the lab, each core will be sectioned into four parts. One part will undergo total chemical composition analysis following the procedure outlined by Hossner (1996). From each of the other three parts, samples will be extracted using a 1cm³ standard sampler for the following analysis: Particle Size Analysis, LOI (Loss on Ignition); Carbonates; identifications of macrorests; diatoms; chlorophyll derivatives and total carotenoids content In conclusion, all the data collected through these methodologies will be processed using Tilia software".

The research will be carried out in the Department of Theoretical and Applied Sciences of the University of Insubria.
