DECREES

Art. 1 - Object

A selection procedure by qualifications is hereby opened for the assignment of n. 1 junior research grants with a duration of 1 year for the academic recruitment field of Information at the Department of Theoretical and Applied Sciences.

Title of the research: **“ESPE: Enforcing Security and Privacy at the Edge of the IoT network - a data-driven approach based on attributes and policies for guaranteeing information efficiency, reliability and availability following the fog computing paradigm”**.

Research Project:

“The spreading of IoT technologies requires to set up a distributed platform, able to deal with scalability and interoperability issues and to securely manage the huge amount of transmitted data in real-time. Such a platform essentially represents a middleware layer, which can be designed starting from the emerging fog computing approach and can be integrated with a flexible policy enforcement framework based on Attribute-Based Encryption (ABE). The goal is to reduce bandwidth consumption and delay, producing faster responses, and guarantee security and privacy, for regulating a data-driven access to resources. Starting from such premises, the present proposal, named “Enforcing Security and Privacy at the Edge of the IoT network” (ESPE), concerns the design, development and validation of a cross-domain system to tackle the problem of efficient and secure data sharing in IoT. The solution aims at having a relevant impact in many every-day-life users’ applications and industrial fields.”.

The research will be carried out in the Department of Theoretical and Applied Sciences of the University of Insubria.

Responsible Scientists: PhD Alessandra Rizzardi.
